

## **Meeting with TA Notes, 5:23 - 5:45 on 11/15/22**

### **Overall Notes:**

- Front end home page looks good
- Api call for search song is good but we need to implement front end for next week
- Popularity score and transactions database is up and running, just needs front end
- The Login/Register page is not working but in order to test the actual skeleton of the profile page comment out the login and register function to build the skeleton. //comment out user authentication
- Need a route for the trends page for data trends

### **Aishwarya's Suggestions:**

- Prioritize smaller task like login/register functions,
- Create favorites page, a user can like a song and add it to there "favorites page" (suggestions)
- Double check and make sure your code is up to date (push to main and start fresh)
- Book presentation slot
- Be mindful of timing, this is week 3 and after fall break we only have 3 days before we must present
