

UniSpot Week 2 Release Notes

11/08/22

New features

- Pivoted from using Spotify API to Rapid API. We plan to use Shazams search api request to gather data in real time. Furthermore, this means that we will no longer be using Spotifys O-Authorization and all login/register features will be independently managed and created by the UniSpot team.

Improvements

- Database Diagram has been finalized and is awaiting creation in the Create.sql file.
- HTML and Javascript implementation for /Login route (SQL not set up yet)
- HTML and Javascript implementation for /Register route (SQL not set up yet)
- Implemented Shazam Search function for JS. HTML and SQL not set up.
- Created example data trend bar graph.
